HUFSD SCIENCE RESEARCH
PROGRAM

Our Mission:

Through our science research program, students will learn how to conduct and research an original research project. The course is structured so that students learn research methodologies through literature reviews and laboratory experiences. We offer an exemplary learning experience that enhances the student's knowledge, skills, attitudes, and values, which enables them to be contributing members of both our school community and our greater society.

“Scientific research involves going beyond the well-trodden and well-tested ideas and theories that form the core of scientific knowledge. During the time scientists are working things out, some results will be right, and others will be wrong. Over time, the right results will emerge.” – Lisa Randall
