

Marc Acevedo

“There was no ‘before’ the beginning of our universe, because once upon a time there was no time.”

-John D. Barrow

Science is important to me because the world is constantly changing, science gives me the skills to analyze and think logically.

Alex Alvarado

In questions of science, the authority of a thousand is not worth the humble reasoning of a single individual.

—Galileo Galilei

Science is important to me for an innumerable sum of reasons. The most prominent of them, however, comes in the simplest and most natural form: curiosity; and the almost insatiable thirst for explanation and truth.

Ashley Angstadt

My favorite scientist is Marie Curie.

~ “ Nothing in life is to be feared, it is only to be understood. Now is the time to understand more, so that we may fear less.”~

Science is important to me because it is everywhere, especially in our daily lives. Without science, the basics of life would have no meaning. Science helps to explain the world that we live in.

Jessica Baik

“It is not the strongest of the species that survives, nor the most intelligent that survives. It is the one that is the most adaptable to change.”

~ Charles Darwin

~ Science is important to me because it's what makes the world go on. Science is tied to everything in the world that surrounds me, and if I didn't learn about all the info that goes with it's many types, I would be so lost in the world. The information science provides is interesting to know, and it gives me a sense of knowing about what goes on in myself and the world.

Claire Beach

Favorite Scientist: Clara Barton

▶ “I may be compelled to face danger, but never fear it, and while our soldiers can stand and fight, I can stand and feed and nurse them”

▶ -Clara Barton

Clara is my favorite scientist because she is a woman who cared about other people more than herself and worked for the good of other people. She saw the terrible suffering and lack of supplies that wounded soldiers endured before they could be taken to hospitals, she distributed the supplies and helped to nurse soldiers. When Clara learned of the International Committee of the Red Cross, she set out to convince Americans that the United States should be a part of this organization. She left a lasting effect on the world, that inspired people to do things for others in need.

Favorite scientist:
Charles Darwin

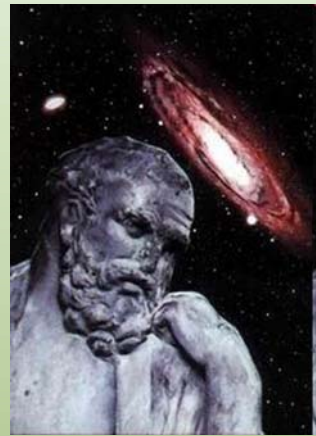

"In the struggle for survival, the fittest win out at the expense of their rivals because they succeed in adapting themselves best to their environment."

– Charles Darwin

Science is an important topic because without science the vast universe would be a mystery.

Rachel Bosco

Conor Byrne

Anaximander, often called the founder of astronomy, is my favorite scientist. Anaximander was not afraid to challenge the local norm, and think past there being just gods and goddesses. As he once said “Whatever has come into existence, must also pass away with necessity. Is it true to say, then, that there is nothing infinite in this world?” Anaximander was looking for physical proof when he said this. Anaximander also invented things such as the gnomon, similar to a sundial, as well as the first map and globe.

- I would have to say that Science is one of my favorite subjects. I enjoy Science because of the challenge it gives me. It also makes me think about all of these possible things that are going on at once, how minute cells and atoms are. How complex all matter is, and astronomy, the size of the universe, and how we are just a speck in history. Science is such a fun and interesting subject to take and I’m glad I was accepted into the Science honors society.

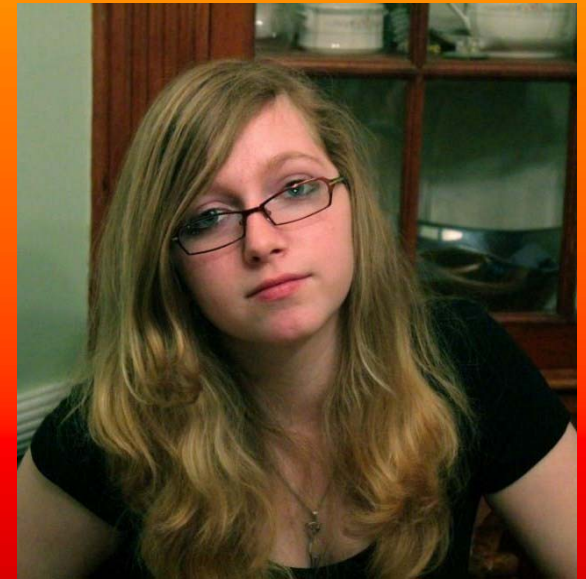

Allegra DePasquale

“Somewhere, something incredible is waiting to be known.”
– Carl Sagan

I am greatly inspired by the cosmologist, astronomer, and astrophysicist, Carl Sagan.

Science is our way of interpreting the natural world; if a significant portion of our time and energy was not devoted to science, we'd be no better off than we were in the Christian Dark Ages. The well-being of society as a whole would suffer.

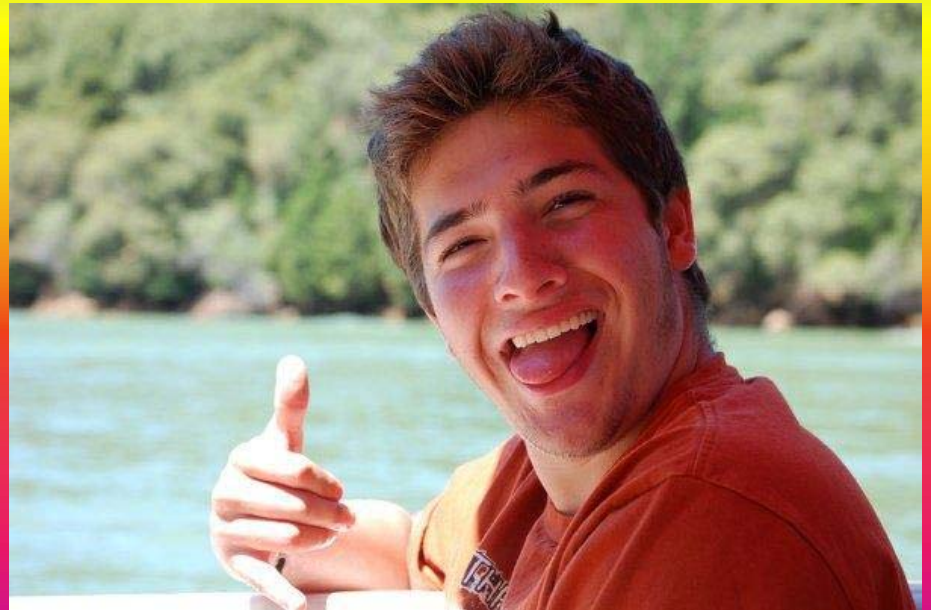

James
Watt

WATT
invented the
steam engine.

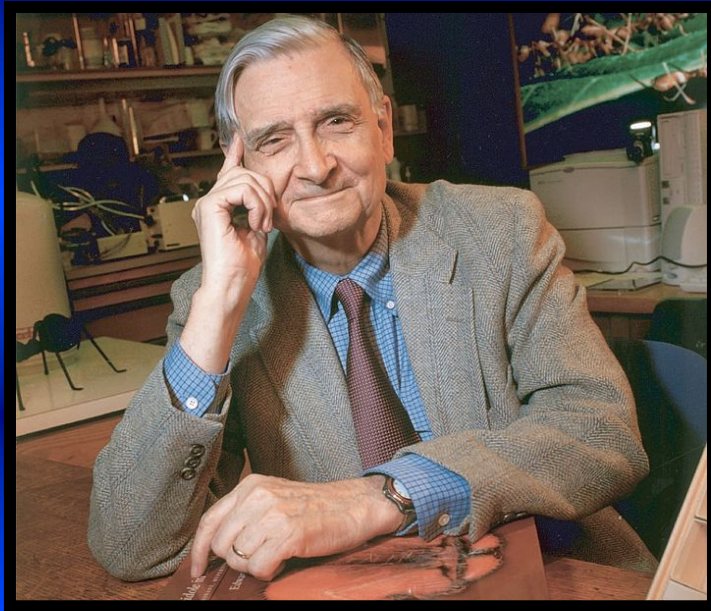

Brent Filippini

***“I sell here, Sir, what
all the world desires
to have—POWER.”***

Erica Flor

“There is no better high than discovery”
- E.O. Wilson

Science is important to me because it answers the constant questions I have about the universe. Simultaneously though, it allows my curiosity to expand because science is never over. There is always something else to discover, something new to realize.

Holly Flores

Favorite Scientist: Stephen Hawking

“One, remember to look up at the stars and not down at your feet. Two, never give up work. Work gives you meaning and purpose and life is empty without it. Three, if you are lucky enough to find love, remember it is there and don't throw it away.” — Stephen Hawking

Science is important because it furthers our understanding of life and gives us a deeper satisfaction or peace as we gain this

Danny Gallagher

"This paper will no doubt be found interesting by those who take an interest in it." -John Dalton

Science is important to me because I, personally, wish to pursue a career in Science. The information and way of thinking you acquire by pursuing science can be applied to many different things in life.

BRIAN GILBERT

“Nature does not act by purposes.”

-Erwin Schrödinger

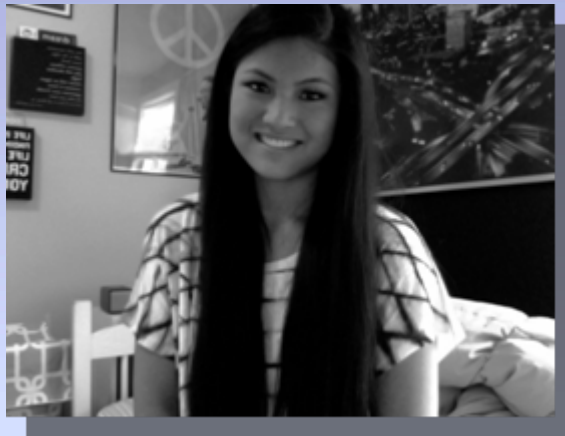

Science is important to me because it is our best tool for understanding the world.

Marie Curie once said, “A scientist in his laboratory is not a mere technician: he is also a child confronting natural phenomena that impress him as though they were fairy tales.”

Science is **important** to discover what has yet to be discovered. Science is the field to which new ideas are discovered and introduced to the world.

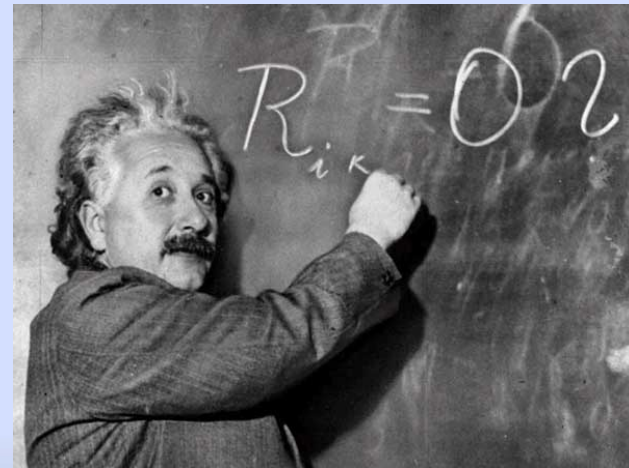

Lucie Gulino

Without science, where would we be? Science explains nearly everything in our lives including life itself.

“Any intelligent fool can make things bigger, more complex, and more violent. It takes a touch of genius—and a lot of courage—to move in the opposite direction.”

~Albert Einstein

Will Hannon

I love Science because of the possibilities it offers to advance our understanding of the universe and our understanding of ourselves. Science offers us a way to fix the problems of the world and improve our way of life.

"Science knows no country, because knowledge belongs to humanity, and is the torch which illuminates the world. Science is the highest personification of the nation because that nation will remain the first which carries the furthest the works of thought and intelligence."

"Louis Pasteur"

I ♥ Science Megan

Explore The Possibilities

Hansen

Science is important to me because it holds the potential to make our future more sustainable and humans more knowledgeable and earth-friendly... and because it's cool.

...man is a part of nature, and his war against nature is inevitably a war against himself.”
~Rachel Carson

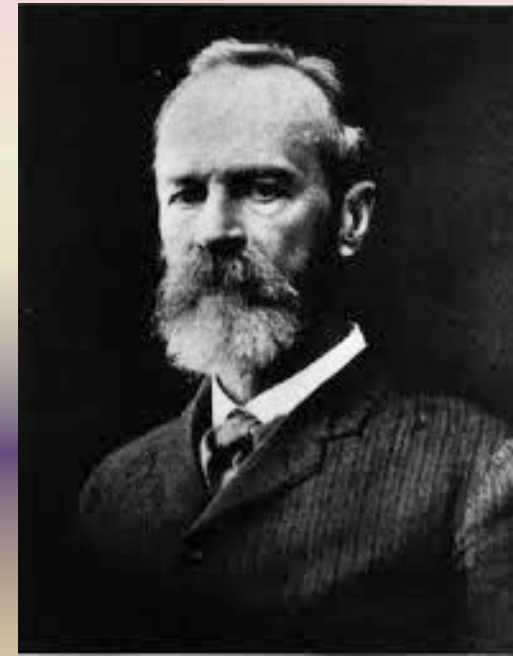

Cindythia Harjono

Scientist I Admire: William James

“Act as if what you do makes a difference.
It does.”

-William James

I admire William James because of my recent study in Columbia University in psychology. With his method of analysis, introspection, experiment, and comparison, he helped me to understand some methods of psychology to apply in project: “The Over Justification Effect.”

Holden Kata

"While you are experimenting, do not remain content with the surface of things. Don't become a mere recorder of facts, but try to penetrate the mystery of their origin." ~Ivan Pavlov

Why do I like science??

Oh boy! Well there are a lot of reasons to like science!! I like it mostly because I'm an inquisitive person, so science is able to answer most of the questions I have in a detailed explanations!

Kaylyn Johnston

- Science is important to me because it allows for individuals to learn through experience, to determine questions, and figure out answers. Because of my passion and drive to become a nurse in the future, I am eager to learn about the field more and eventually make it a part of my daily life.

- The scientist I admire is *Jonas Edward Salk*.
- *"The reward for work well done is the opportunity to do more."* - *Jonas Salk*
- Salk is an inspirational being, especially to myself, because during my middle school years I was able to learn a lot about his accomplishments and even chose to write a research paper on his life and works. Because of Jonas Salk and his invention of the polio vaccine, the medical field has improved tremendously and has become what it is today.

“The thought grew strong in me that since I had gone to the trouble of being born, I might as well be useful in helping people live long and healthy lives. And this thought has always resided in the back of my mind.”

– **Koichi Tanaka**

Koichi Tanka was the Nobel Prize winner in Chemistry in 2002 for developing a new method of “mass spectrometric analysis” of biological macromolecules.

Emaad Khwaja

Kylee Kiesel

A scientist in his laboratory is not a mere technician:
he is also a child confronting natural phenomena that impress him as though they were fairy tales.
-Marie Curie

Science means to me the opportunity to question everything and make discoveries through experimentation.

Samantha Lai

--Science is important to me because I can always have fun learning about it and it shapes the way I think of the world.

It never occurred to me that there was going to be any stumbling block. Not that I had the answer, but [I had] the joy of going at it. When you have that joy, you do the right experiments. You let the material tell you where to go, and it tells you at every step what the next has to be because you're integrating with an overall brand new pattern in mind.

-Barbara McClintock (1984)

AMBER LINDNER

“Declare the past, diagnose the present, foretell the future.”

- Hippocrates

Science is one of my infinite passions. Without science I would have never become interested in the “how comes?” of everyday life. By continually asking “why”, it gives society the possibility to learn something totally new. In my future I would like to establish myself somewhere in the field of biology. Whether it be as a researcher or a specialized physician. Today Hippocrates is considered the “father of medicine. He would have never i if he didn’t reject the typical views of his time period , and started to observe and study the human body. His belief was that illness has a physical and a rational explanation. To this day without Hippocrates standing up for what he believed in, Medicine might have been completely different. My goal as a scientist will be to impact someone, somewhere, and somehow.

Science is most appealing to me because, unlike other subjects, it is exact, most every question or problem has a definite answer. With enough dedicated research and analysis an answer will almost always be found.

If your experiment needs statistics, you ought to have done a better experiment.

Ernest Rutherford

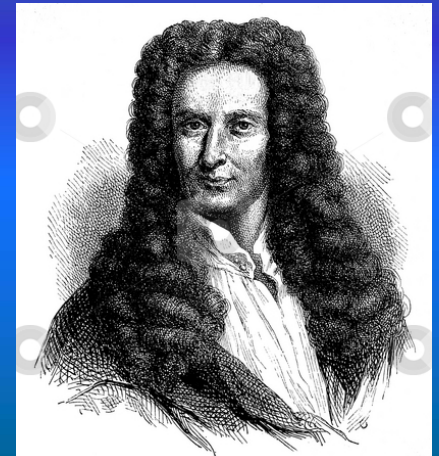

•Issac Newton

Ari Moskowitz

•*“To myself I am only a child playing on the beach, while vast oceans of truth lie undiscovered before me”.*

•One of the reasons I like Issac Newton so much is because he was able to over come adversity and achieve greatness. He loved nature and constantly wanted to know the reasoning behind what he saw; just like I do, He saw life in a very simplistic manner and was able to communicate his finding to the world.

Science is important to me because it answers all the questions I have about the world.

ANNIE NUGENT

- My favorite scientist is Charles Darwin. His explanation for the diversity of species is elegant, simple, and ties all aspects of the world together into one idea. His ideas are revolutionary and has shaped not only the scientific field, but all aspects of life.
- “ A man who dares to waste one hour of time has not discovered the value of life.”- Charles Darwin
- Science is important to me because it gives us an understanding as to why things happen in the world around us and helps us learn to live as one with our universe.

Matthew Petryk

Favorite Scientist: Richard Feynman

“A great deal more is known than has been proved.” – Richard Feynman

Science interests me because it proves, and sometimes disproves, what’s “known”; it grants a deeper understanding of the way the world works, and allows one to comprehend, at a basic level, everything around him.

Science is important because it explains the ways of the world even for those who don't question it.

Jennifer Polster

Favorite Scientist: James D. Watson (co-founder of DNA)

“If I have seen further than others, it is by standing upon the shoulders of giants.”

-Isaac Newton

I admire Carl Sagan as a scientist. He once said “Imagination will often carry us to worlds that never were. But without it we go nowhere,” and I completely agree.

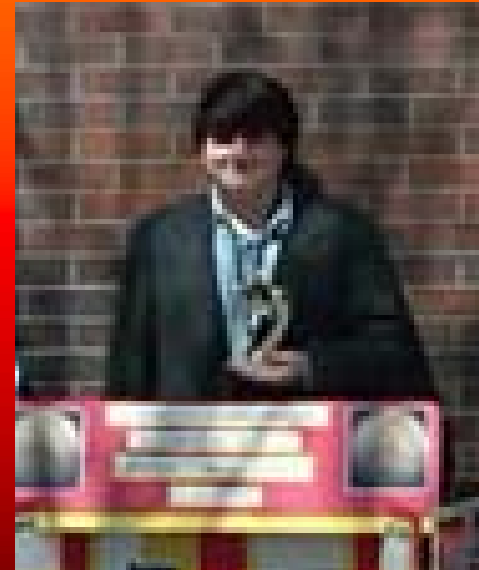

Science is important to me not only because it provides answers to many of life’s mysteries, but it is also fascinating and awe-inspiring.

Jacob Roday

“Just remember - when you think all is lost, the future remains” – Robert Goddard

Science is a fundamental part of my life, as science drives me to better myself and others.

Ana Ruzic

11th

- I admire Marie Curie
- *"Nothing in life is to be feared, it is only to be understood. Now is the time to understand more, so that we may fear less."*

— **Marie Curie**

- **Science is important** because it is a part of our daily lives. It helps explain how things occur and solves problems that have been questioned for centuries.

Thomas Scott

A scientist I admire is Aristotle. He not only was a famous philosopher but a famous scientist as well.

“He who sees things grow from the beginning will have the best view of them.”

--Aristotle

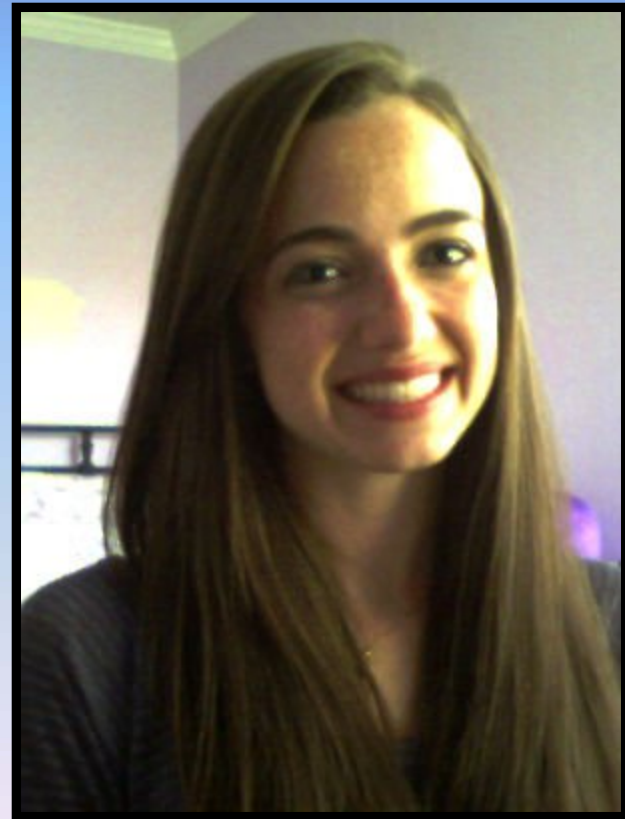

Science is important to me because it always made me think outside the box. I always had questions and it was a source of my curiosity that kept growing until it got an answer.

Nikki Smoot

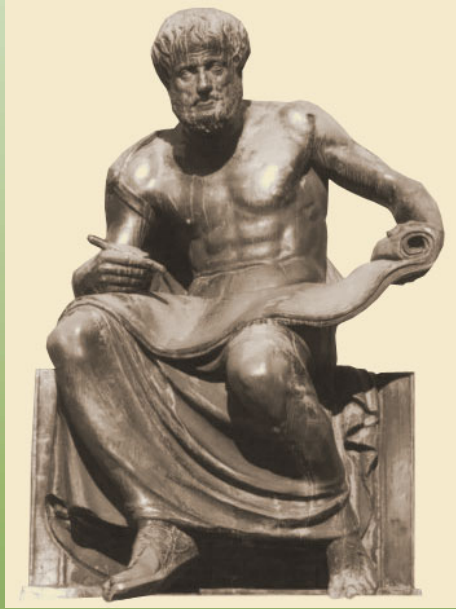

“Scientists are peeping toms at the keyhole of eternity.”

--Arthur Koestler

Science is a very important part of my life and I thoroughly enjoy studying it. Our knowledge of science is constantly expanding and changing. Science is a field that can be altered when new discoveries are made and this makes the idea of discovery very exciting. I enjoy learning about science here at Huntington High School and plan on continuing to explore science after graduation and throughout life.

Josh Solomowitz

“You will never do anything in this world without courage. It is the greatest quality of the mind next to honor.”

-Aristotle

Science is one of the passions of my life. It just makes sense to me and I can always figure it out. I always make time for it whether it's competitions, homework, labs, or even just talking to the science teachers. Science is one of the most important things to me.

ERIC SZE

11th Grade

Scientist: Albert Einstein

QUOTE: Once we accept our limits, we go beyond them.

Why Science is important: Science is everywhere in life. Science is what keeps not only the human race, but also other organisms alive. Science is what secures a better, and safer future more the generations to come. Science should be a necessity. We can't escape the significances of science in our world.

**Emal
Wafajow, 11th
Grade**

The scientist I have the upmost
veneration for is
Mr. Albert Einstein.
He made unprecedented
contributions to the fields of
physics and mathematical theory

**“The important thing is not to stop
questioning; curiosity has its own reason
for existing.” – Albert Einstein**

His insatiable curiosity and tenacity are what kindle my own quest on the pursuit of knowledge. The beauty of such a phenomenon is that we are contemplating how the very fabric of reality is relative to the universe. As time progresses, we become able to answer questions about intricacies that mankind once thought an impossible task.. Let science enlighten and shine on every soul that refuses to remain hindered and blinded by the shadows of irrationality.

ALEXIS WEITZNER

Richard P. Feynman

“Nobody ever figures out what life is all about, and it doesn't matter. Explore the world. Don't think about what you want to be, but what you want to do.”

Science is important to me because it is everywhere, affecting our lives and activities every day.

Anna Wertheim

I admire the scientist Rosalind Franklin. She once said “You look at science (or at least talk of it) as some sort of demoralising invention of man, something apart from real life, and which must be cautiously guarded and kept separate from everyday existence. But science and everyday life cannot and should not be separated. Science, for me, gives a partial explanation for life. In so far as it goes, it is based on fact, experience and experiment.”

Science is important to me because it is an integral part of everyday life. It lets us explore and gain answers through experimentation and observation

Elizabeth Whitcher

11th Grade

“What we know is a drop, what we don't know is an ocean.”

— Isaac Newton

Science is important to me because there is always something new in the world to be discovered. This quote clearly demonstrates that, that as much as the scientists of the world know and find out, there is always something new in the future. Science shows us how the world works and why it works that way. It gives us explanations for the ways of the world, using tests and labs to prove these theories. Science also can tell us what happened in the past, and can even predict the future.

Adelia Witt

A scientist that I admire is Madame Marie Curie. She really stands out to me as a major scientist of her time because she discovered radium. Since she studied radium for such a long time, she eventually died from her research. A bittersweet ending to such a marvelous person's life.

“I was taught that the way of progress was neither swift nor easy.”

~Marie Curie

Jonathan Wood

Louis Pasteur- In the field of observation, chance favors only the prepared mind.

Science is important to me because it can be used to accomplish a lot of good for the world and science is a universal bond for every human.

Scout Zeigler

**"The eternal mystery of the world is its comprehensibility."-
Albert Einstein**

**Science is important because it has allowed for the creation of
modern technology.**
