CHIPOTLE FACES E.COLI’S AFTERMATH

The popular foodchain struggles to regain its footing following the news of their food contamination

By Rachel Moss

The outbreak of E.coli linked to Chipotle Mexican restaurant food chain beginning in October and November has lead to the infection of 53 individuals in nine states, including Illinois, Maryland, Pennsylvania, California, Minnesota, New York, Ohio, Oregon, and Washington. This bacteria strain has been linked to food served at Chipotle, though a single menu item or food source has not yet been identified as the offender. Chipotle’s negative publicity has resulted in a decrease in customer traffic and has lead to plummeting stock prices. At its peak, Chipotle’s stock was at a high of approximately $750 per share; however, it has since dropped to as low as $410. Continued on Page 5

Huntington Robotics Gears Up for Competition

THE WOODSHOP- Students and mentors alike are busy bustling around the room, preparing for this year’s competition by building, marketing, and fundraising for an all-new robot. Huntington Robotics had just wrapped up its third consecutive build season, and with the competition looming on the horizon, it’s crunch time for members of this student-run organization. Also known as Team 5016, (They were the 5,016 team to register for their competition) the robotics team here at Huntington works year-round to be able to successfully compete in the FIRST robotics competition.

FIRST (For Inspiration and Recognition of Science and Technology) is an organization founded by Dean Kamen, the inventor of the Segway and renowned entrepreneur who holds over 600 patents worldwide. Kamen founded FIRST on the principle that if kids look up to famous athletes, why not put a sports-like twist on engineering to inspire the engineers and business men/women of the future? Each year, over 73,000 students participate globally in FIRST events, with over 5,000 teams. Each year at a kickoff event, a new challenge is announced to teams all over the world in a live broadcast, and teams have 6 weeks to build a robot that could successfully compete in this year’s competition. El triángulo norte que forma Honduras, El Salvador y Guatemala es una celda, en un celda, un niño llora la muerte de su padre, el otro tiene que escoger entre ser asesinado o convertirse en asesino, miles kilómetros al norte otros toman la decisión que es mejor morir al cruzar una frontera, que renuncie las manos de sangre en una guerra de maras que no cesa y al igual que el cráneo se reproduce devorando los órganos vitales de nuestros países.

Alzo la mano, al formar parte de llover a mi padre años atrás cuando fue asesinado y de arriesgarme el peligro al cruzar la frontera cometiendo un delito al cruzar ilegalmente en acuerdo con las leyes americanas, un delito que muchos enterándose y otros juzgaran. Desde mi punto de vista no lo llamo una falta a la ley, sino, desesperación primitiva. Sólo somos habitantes de este fenómeno cuando los animales inmigran por falta de necesidades, como desesperación por comida. Como verán en nuestros países la causa de la inmigración se esconde detrás de la violencia, en la cual si te paras en la cuadra de la mara contraria tus opciones son que llegas envuelto como una momia cuadra de la mara contraria tus opciones son que llegas envuelto como una momia.

Lo que llega en nuestra ciudad como un plebeyo y de arriesgarme el pellejo al romper las leyes americanas, un delito que muchos juzgaran. Desde mi punto de vista no lo llamo una falta a la ley sino, desesperación primitiva. Sólo somos habitantes de este fenómeno cuando los animales inmigran por falta de necesidades, como desesperación por comida. Como verán en nuestros países la causa de la inmigración se esconde detrás de la violencia, en la cual si te paras en la cuadra de la mara contraria tus opciones son que llegas envuelto como una momia cuadra de la mara contraria tus opciones son que llegas envuelto como una momia.

La frustración y la desesperación en la que viven los niños centroamericanos se refleja entre los años 2012-2015 al cruzar la fronteras ilegales en acuerdo con las leyes americanas, un delito que muchos enterándese y otros juzgaran. Desde mi punto de vista no lo llamo una falta a la ley sino, desesperación primitiva. Sólo somos habitantes de este fenómeno cuando los animales inmigran por falta de necesidades, como desesperación por comida. Como verán en nuestros países la causa de la inmigración se esconde detrás de la violencia, en la cual si te paras en la cuadra de la mara contraria tus opciones son que llegas envuelto como una momia cuadra de la mara contraria tus opciones son que llegas envuelto como una momia.

**SYDNEY JEAN-BAPTISTE**

**GRADE 12**

My interest in Interior Design all started when I was very young, and I began watching the Extreme Home Makeover Edition TV show. It inspired me to create artwork based on color schemes and patterns. I dislike the interiors shown on the show so I decided to create my own design. My paintings are made up of different shapes and colors. My creations tend to incorporate a variety of color palettes and patterns. For example, I handcrafted a female body using my artistic skills for a career in the future. I enjoy creating my own artwork. The viewer is intentionally left to come up with their own interpretation of what I am trying to convey. This is where I got the idea of one lone eye looking into the darkness of the painting. I chose to use black and white colors to create the dark and light areas expressed impending doom. I enjoy creating artwork that helps me work towards my goal of becoming an interior designer.

**LARS DRACE**

**GRADE 10**

**Loran's Essay**

**Inspirations for my work come mainly from my own experience. I can express my feelings through my art. When I was younger, I used to wear a coffee filter on my head, which made me feel like a superhero. I had a working relationship with my mother, who was a painter. She would often take me to art shows in the village. When I was around 8 years old, I started painting. I began with simple colors and shapes, and then moved on to more complex ones. I use my artistic skills for a career in the future. I enjoy creating artwork that helps me work towards my goal of becoming an interior designer.

**Gabrielle Ferreira**

My work explores the idea of a woman's interior as a space of refuge and self-expression. I use the female form as a metaphor for the internal landscape of the mind. I create portraits that are both intimate and powerful, highlighting the complexity and depth of the human experience. My work is inspired by the works of photographers like Tracey Emin and Cindy Sherman, as well as by the paintings of Frida Kahlo and Georgia O'Keeffe. I aim to create images that are both visually striking and emotionally resonant, inviting the viewer to explore the depths of their own inner worlds.

**ST. HELENA - THE SECRET OF THE SOUTH ATLANTIC**

The largest travel guide book published in the world, The Lonely Planet, released its annual top list of destinations, “Best in Travel 2016.” Named number one on the list for Britain, St. Helena and the Seychelles, was moved by how many travelers and being fully embraced by locals. It was viewed as a catalyst for the island’s tourism industry and Kean Ferin.

**ST. HELENA: WHERE IS IT?**

St. Helena is a small, semi-deserted island about 1,200 miles west of the South American coast of Africa. It is just over 10 miles long and does not exceed a width of 6.3 miles. St. Helena is Britain’s overseas territory and is around 77 square miles. Although St. Helena is of volcanic origin, any previously existing volcanoes are now extinct. Its tallest point is Diana Peak, standing at 2,600 feet. It lies in the path of South Atlantic trade winds and the annual rainfall is 40 inches. “Despite the development of holiday-makers and day-trippers by the busload, the area’s well-protected and spread-out natural attractions have somehow managed to escape the frenzied tourist traffic of other less well-managed places,” states Lonely Planet.

**WHY IS IT FAMOUS?**

Napoleon I of France reigned from 1804 to 1815, not considering his short abdication. In April 1814, Napoleon was forced to resign his throne and was exiled to the Mediterranean island of Elba for a year. However, in June of 1815, Napoleon was once again defeated and the European powers would not let him escape imprisonment again. He was banished to the barbary, rocky island of St. Helena and left there to die. Napoleon was recorded by the Comte de las Casas, an artist who was part of his entourage in exile, to have said: “For what infamious treatment are we reserved!’ he exclaimed. This is a legend of death. To injure, torture and violence they now add insult and protracted torment. If I were so hateful to them, why did they not get rid of me? A few musket balls in my heart or my head would have done business, and there would at least have been some energy in the crime.”

**THE LONELY PLANET BEST IN TRAVEL 2016 INCLUDES:**

1.) Botswana
2.) Peru
3.) USA
4.) Palau
5.) Latvia
6.) Australia
7.) Poland
8.) Sweden
9.) Uruguay
10.) Zimbabwe
How Do I Ask A Girl Out? A GUY’S OPINION

BY ALEX HEIDRICH

While many guys out there via the chance to pursue a relationship, many guys however don’t have any idea on how to ask a girl out on a date. Here are a few steps that can aid you in your quest in going out with the partner of your dreams;

1. GET TO KNOW THE PERSON BEFORE YOU EVER GO ON THE DATE

If you just walk up to a girl and ask her to go on a date without even getting to know her, 9 times out of 10 that girl is going to think you’re very weird and won’t give you the time of day to take things any further. Making a good impression on the girl can lead to good things in the future that will help you in getting to know your desired partner. It helps if you can find common interests and hold a conversation.

2. STEP 2 ENGAGE IN SOME SMALL FLIRT WITH HER

Just in case you didn’t already realize, this doesn’t mean buying her chocolates and flowers after you guys have only talked for one week. You don’t want to fall into that trap of the “friend zone” where she sees you only as a good friend because that obviously isn’t what you want. Create some tension between the two of you will lead her to be more inclined to go out on a date with you.

3. BEFORE YOU ASK HER, READ HER BODY LANGUAGE

If you can tell that she is feeling upset or she is stressed out about something, this isn’t the time to ask her. You are asking her a very stressful question, and adding more stress onto her date will make them sour. Find a time when she is in a happy mood and you guys can talk about a casual conversation.

4. DO CASUALLY ASK HER WHAT SHE DOES ON THE WEEKEND

You don’t want to start the conversation off by asking the million dollar question. If you ease into the conversation and you guys begin to catch a rhythm, it won’t be as awkward. Be careful though on the questions you are asking her to hang with you over the weekend could get boring.

BY SARAH JAMES

Apparently, asking a girl out can be intimidating. We don’t really see it... but having to actually ask is hard for some. So here are some tips on how to ask a girl out, or more importantly, some tips that will really help you get to know her and get to know you.

P.S keep in mind we can ask you out too.

START SMALL: JUST TALK TO HER

Talking to someone is the first step to really getting to know them. How can you know for sure that you are going to get anywhere with someone if you haven’t spoken to them? In talking to your girl and seeing if you like them even more than you did before, you can find out if that you have absolutely no common knowledge, or no chemistry. This is important to know, before you wind up on a date that is just one big disaster waiting to happen. No one likes that. Just tell her she is interested in you and we and how we go hopefully you guys have lots of common interests because if you guys have a shared sense of humor.

Don’t be a Dork

Girls don’t like mean guys. They might pretend that they’re into “bad boys” or something dumb, but running in at 2 hours 36 minutes, it’s visceral, chilling, and still gives you that “It’s visceral, chilling, and still gives you that" feeling. The Revenant is a film that I’ve been looking forward to for almost a year. I placed it in the #1 position of my Top Five Films for 2015. I should look forward to, as I clearly had high expectations. Now that it is finally released, I can confirm that this film exceeded those expectations.

Directed by Alejandro G. Iñárritu (Academy Award-winning director of Birdman) and starring Leonardo DiCaprio and Tom Hardy and Domnhall Gleeson, this film is [holyly] based on the true events of an 1820s frontiersman Hugh Glass (played by DiCaprio). They were incredible– most notably Leonardo DiCaprio and Tom Hardy. Their performances actually showcase the bond of the two men, as well as their relationship with the wilderness.

First and foremost, the performances in The Revenant were incredible– most notably Leonardo DiCaprio and Tom Hardy. Of course, DiCaprio is known for never winning an Academy Award, despite his five nominations and great performances, though I truly think this could be his year. The technical achievement of The Revenant is another thing to be praised. The cinematography is perhaps the most impressive of any film I have seen in recent memory, as well as the other technical achievements. The CGI (computer generated imagery) used also adds to the feel of the film’s realism. Although CGI is very easy to do, and unlike any other visual effect, it can be there for quite a while. The CGI that are usually associated with action scenes. Along with simply being stunning to look at, these long, continuous shots strengthen the connectedness of the film.

Apple’s New Battery Case

By Michelle D’Alessandro

As Apple recently released their own Apple battery case, a wave of mixed reactions followed the product’s unveiling. Some thought it was a great move on Apple’s part, as it gave them an edge in the market for phone accessories that are typically distributed by independent companies. The release of their own design could result in more profit and could be a guaranteed buy for ‘Apple fanboys’, people completely dedicated to the brand, as well as those more weary of the quality of third-party case companies.

On the other hand, many viewed the case in a much more critical light. With the steep price of about $100, it costs considerably more than the majority of phone cases offered by other companies, causing many to see it as a rip off and an opportunity for the enormous company to make a huge profit off those who swear by their brand. The need for such an excessive price is a greedy move, and doesn’t seem to factor in the much more competitive prices of other cases, instead betting on the Apple name to bring in buyers.

Looking at the case, it’s hard to tell that it’s an Apple design (given, of course, you ignore their trademark logo emblazoned on the back). Simply put, it doesn’t *look* Apple. It’s awfully shaped, extending down, making the phone look much longer than before with a rectangular hump hanging out on the back. This is only to be expected with any battery case, but where Apple prides themselves on the sleek design and the feel of their products, they seemed to fall short on their battery case. There are many other cases on the market that are less than a quarter of the price and don’t seem to factor in the much more competitive prices of other cases, instead betting on the Apple name to bring in buyers.

Looking at the case, it’s hard to tell that it’s an Apple design (given, of course, you ignore their trademark logo emblazoned on the back). Simply put, it doesn’t *look* Apple. It’s awfully shaped, extending down, making the phone look much longer than before with a rectangular hump hanging out on the back. There are many other cases on the market that are less than a quarter of the price and don’t seem to factor in the much more competitive prices of other cases, instead betting on the Apple name to bring in buyers.

All in all, the new Apple battery case seems useful, but iPhones shouldn’t need them. There are endless accounts of iPhones running out of power in a matter of hours despite minimal usage, the deteriorating quality of battery power over time, and the death of phones in situations where extended battery power could make a real difference. Yes, a battery case is nice, especially those that don’t cost $100, but the need for one that’s additional power could gain if only they ceded their relentless search for a thinner phone, not to mention to ons of impossibly thin phones (remember ‘bendgate’?). The new battery case only serves as a reminder of one of their most notable shortcomings— their battery.
